EXPERIENCE

The Fetterhoff Group, Columbus, Ohio — *Technology Advisor*

May 2016 - Present

- Guide hardware purchases

- Troubleshoot hardware and software issues

- Discuss importance of different technologies

PROJECTS

Bug Tracker — *Github Repo*

Programming bug tracking/sharing site. Done with the MERN Stack and Redux for state management in the Front-end. Client security done with JSON Web Tokens.

Chatbot — *Github Repo*

Chatbot application. Built on the MERN Stack with the bot using DialogFlow to serve focused conversation. Page built around a fake e-retailer who sells clothing items.

Agar.io Clone — *Github Repo*

Agar.io multiplayer game clone. Uses Socket.io to send data back and forth between client and server, which lead to jitteriness but otherwise functional game. Focused more on learning Socket.io than making a feature rich experience.

Portfolio — *Github Repo*

My personal portfolio site. Mobile responsive UI. Built a particle animation system in P5.js for the header. Turned into a PWA to allow for faster loading and offline capability.

SKILLS

MERN Stack Development
NoSQL Databases
Data Visualization
Webpack/Babel Compiling
Progress Web Apps
Canvas Animations/Games

TECHNOLOGIES I USE

Daily:
HTML
CSS
SASS/SCSS
JavaScript
Git
React

Weekly:
npm
NodeJS
Redux
MongoDB
Mongoose
Express.js
D3.js
P5.js

Monthly:
Socket.io
Webpack
Babel
Heroku
